Description:
Human secreted CD160, Fc fusion protein, also known as Natural killer cell receptor BY55, GenBank Accession No. NM_007053, a.a. 27-159 with C-terminal His-tag, expressed in a HEK293 cell expression system. MW = 15.6 kDa (monomer). This protein runs at a higher MW by SDS-PAGE due to glycosylation.
Assay Conditions: Used #72008 protocol. Breifly, coated plate with 100 ng/well of BTLA in 50 µl (overnight at 4 deg). Added various concentrations of either CD160 (0-10 µM) or HVEM-Fc (0-3 µM) CD137-biotin. Initiated binding assay with addition of 100 ng/well HVEM-Fc-biotin. Incubated for 2h at RT. Detected binding with Strep-HRP generated luminescence.
Application:
Useful for studying protein binding and screening small molecules.
